Distribution Essentials
Enterprise, SX.enterprise

The Overseas Trade module helps minimize the complexity of purchasing goods overseas.

Overseas Trade

Conducting business with overseas trading partners introduces a new level of complexity to the distribution channel. The vast distances and time considerations mean that buyers and inventory managers must find a way to track inventory in production overseas, as well as in-transit, in order to manage product lead time, monitor multiple purchase orders contained within a shipping container, and minimize the docking and demurrage fees encountered with overseas trading.

New Tracking and Vessel Documents

The tracking document represents the container of inventory, and includes one or more purchase orders. The vessel document is a collection of tracking documents, or containers loaded on a single vessel.

Incorporated Tracking Number Receiving

Receipt of inventory allows entry of a tracking number to expedite receipt of inventory on a tracking document.

Expanded Add-on Entry Fields

Addons can be entered in the Overseas Trade module in order to track the numerous fees associated with shipping inventory on cargo ships. These addons are distributed to all related purchases.

Overseas Trade Reports

The Tracking Master List Report produces a listing of all records related to one or more tracking documents. You can also limit this report to a range of tracking document lines. The Vessel Master List produces a listing of all records related to one or more vessel documents.

➔ BUSINESS OBJECTIVES:

Conduct business with overseas trading partners.

➔ BENEFITS:

This module helps you track inventory in production overseas, as well as in transit, manage product lead time, monitor multiple purchase orders minimize the docking and demurrage fees.
